

SOLOMON MUOGHARA

Email: nerdsolomon@gmail.com | GitHub: github.com/nerdsolomon | LinkedIn: linkedin.com/in/solomon-muoghara

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 5+ years of experience designing and building scalable web and mobile applications using Python, JavaScript, React, Django, Flask, Flutter, and Node.js. Experienced in AI-powered applications, LLM integration, data analysis, and cloud technologies, with a strong foundation in software architecture and modern development practices. Passionate about developing high-quality solutions, mentoring aspiring developers, and delivering impactful, user-focused software. [View Portfolio](#).

EDUCATION AND CERTIFICATIONS

Bachelor Of Science (HONORS) - Computer Science National Open University of Nigeria	January 2020 - February 2024
Nanodegree - ALX-T Data Analyst. Udacity/ALX	July 2022 – September 2022
Nanodegree - AWS Machine Learning Foundation 2022. Udacity/AWS	July 2022 – September 2022

SKILLS SUMMARY

- **Languages :** Python, C, Java, Dart, SQL, JavaScript, HTML, CSS
- **Databases :** Postgres, MongoDB, SQLite, SQL Server, MySQL
- **Frameworks :** Flask, Django, React, Flutter, Express.js, Node.js, web2py, Spring Boot
- **Libraries :** Pandas, Numpy, matplotlib, seaborn, bs4, scikit-learn, pygame, tkinter, tensorflow
- **Tools :** bootstrap, tailwind css, PowerBi, tableau, Git, Rest API

WORK EXPERIENCE

FULL STACK SOFTWARE ENGINEER | APTECH LEARNING - Full Time **September 2024 - Present**

- Deliver hands-on training and projects in full-stack web and mobile development using React, Django, Flask, and Flutter.
- Teach algorithm design and back-end/front-end development with Python, Java, JavaScript, Dart, and C.
- Mentor over 70+ students on best practices in software architecture, debugging, and version control.

FULL STACK SOFTWARE ENGINEER | TUNJIO LABS - Part Time **April 2025 – November 2025**

- Built LLM-powered personalized user assistants using prompt engineering and user-context modeling.
- Developed the company's portfolio website and built responsive front-end interfaces using React and Tailwind CSS
- Collaborated remotely with product and engineering teams to deliver scalable features.

TECHNICIAN | CALLISTRIO ICT ENGINEERING **May 2023 - October 2023**

- Installed and maintained CCTV, networking, and fire emergency systems.
- Performed system configuration, upgrades, and preventive maintenance.

PRIVATE PROGRAMMING TUTOR | FREELANCE **December 2022 - April 2023**

- Deliver hands-on training and projects in full-stack web development using Python and Java. (Flask, Django, Spring Boot)

DATA ANALYST AND SCIENTIST | FREELANCE **September 2022 – Sept. 2024**

- Collaborating with researchers, and bankers in data generation, cleaning and standardization.
- Participating in bounty programs in a race to help companies solve problems on their software and uncover loopholes

SOFTWARE AND WEBSITE DEVELOPER | FREELANCE **May 2021 - June 2026**

- Collaborated with developers in quality assurance tests at careersome.com job search application.
- Performing code-base audit and refactoring for cvtocareer.com which helped improve and solved scaling issues.
- Sole developing E-learning website for Treasure Stone Academic Private Schools. [Preview](#)

PROJECTS

Baton website – developed using React, tailwind css, django rest api for back-end and postgres for database. [Visit website](#)

Axterra Website - developed using React, tailwind css for front-end, express.js for back-end, mongodb for database. [Visit website](#)

Tunjio Website – developed the portfolio website for Tunjio Labs using React. tunjio.com

E-learning Website - Using Flask to develop an e-learning website that includes CBT, results printing, file upload and download.

Jolly Podcast Mobile App - developed using Dart programming language for backend and Flutter framework for front-end

ChatBot - Using React and openai LLM to build personalized chatbot that uses user data, activities, to contextualize conversations.

Data Wrangling on TMDB Movies - Using Web Scraping to generate data from the TMDB Movies website to perform data analysis.

Search Server - I was able to develop a search server that can perform query search of strings with over a million lines under 0.15s.

MP3 Player - Using pygame and Tkinter to develop an mp3 player software that works with screen touch and selection navigation.
